

WestFax Cloud Fax

Connector for Xerox MFPs

Connecting cloud fax to Xerox MFPs utilizing internal Xerox fax controls.

With the WestFax Cloud Fax Toolkit (CFT) running on a server, you can easily connect to one or many Multi-Function Printers (MFPs) in your organization and send faxes via the WestFax API integrated with the Xerox server fax kit.

Your users can authenticate on the MFP using your existing infrastructure and then scan and send fax documents. The WestFax CFT is user aware and can implement user specific settings including cover pages and custom reports.

Through the use of the WestFax CFT, organizations can use their existing MFP investment to easily send fax without the addition of 3rd party EIP applications, or the fuss and expense of fax cards, modules and dedicated fax phone lines.

SEND FAX FROM MFP

✓ SECURE SMTP

✓ HTTPS

✓

Three Deployment Frameworks

WestFax Cloud Service Software

Cloud based connector. Software runs on local server at customer location.

WestFax Hybrid Cloud Service

Enterprise Service running on local servers or your cloud infrastructure (AWS, Azure, GCP)

WestFax Cloud Connector Appliance

Custom NUC or 1U server. WestFax Built on-premise server running WestFax services.

Utilizes Internal Fax workflow

No need to click a special app. Just click the Fax button, set your options and send. Fax has never been easier.

Use built-in cover pages

Setup your coversheets using Xerox's built in cover pages or use your own.

WestFax based reporting

Email confirmations of send will still function using WestFax's server based reporting.
